PHATCHARADANAI KANYAPAN

Programmer & Developer · Bangkok, Thailand

phcaradanai@gmail.com · github.com/phcaradanai

Summary

Programmer and developer in Bangkok. Builds business systems (a print gateway with a Go runner and desktop shell, an AI agent control plane, a local-first desktop tool) and online multiplayer games. Works with AI coding agents, directing and checking their output. Every project below links to its repository and to a case study that shows the evidence for each claim.

Skills (as listed on the published CV)

Front end: React JS/TS, Vue JS/TS, HTML, CSS, JS, Flutter (Dart)

Back end and systems: Node.js, Go, C# .NET Core / .NET Framework, Console apps in C# and Python

Data and delivery: SQL / MySQL, Docker

Practice: Web and app design, Development and SEO, Implementing projects independently, Time management

Selected public work

Cursed Market (ตลาดวัตถุต้องสาป)

Oct 2026

Game, prototype · TypeScript 5.9, Node.js 22.12 or later (HTTP and WebSocket server, node:test runner), ws (WebSocket library), React 19, Vite 7, Three.js 0.186

Hidden-information trading game for 2–4 players: server-authoritative seeded rules, per-seat views, replayable audits. LAN only.

github.com/phcaradanai/Cursed-Market · Case study

Relic Tide

Oct 2026

Game, prototype · Godot 4.7.2, GDScript, WebSocket multiplayer (Godot), Godot web export (Compatibility / WebGL 2), Node.js (static server and proxy), Python (asset pipeline)

Real-time 2–4 player extraction game in Godot: 20 Hz authoritative server, filtered snapshots, seeded rounds, receipted art pipeline.

github.com/phcaradanai/relic-tide · Case study

PrintOps

Jul 2026 to Sept 2026

System, production-style · TypeScript, Fastify, React + Vite, Go (runner), Rust (Tauri v2 desktop shell), C# (WebView2 print helper)

Print gateway: external systems POST jobs; a Go runner registers and heartbeats; one React UI serves browser and Tauri desktop.

github.com/phcaradanai/print_ops · Case study

AI Kingdom

Jun 2026 to Jul 2026

AI tooling, production-style · TypeScript, Express, Prisma + PostgreSQL, React + Vite, TailwindCSS, Zustand

Local-first control plane: a decree goes through council, work order, sandboxed runner, validation and review before a human accepts it.

github.com/phcaradanai/AI_Kingdom · Case study

ScopeFlow Thai

Jun 2026 to Jul 2026

Tool, prototype · React 19, TypeScript 5.8, Vite 7, Tauri 2, Rust (edition 2021, zip and walkdir crates), Tailwind CSS 4

Local-first Tauri desktop app that turns vague client requests into Brief, Scope, quote, change-request and acceptance documents.

github.com/phcaradanai/ScopeFlow · Case study

CodeScape

Jul 2026

Tool, prototype · Go 1.25 (chi, pgx, goose, yaml.v3), PostgreSQL, React and TypeScript, Vite with Module Federation, React Flow (2D graph), React Three Fiber (3D universe)

Developer portal and knowledge graph: every detected technology, capability and relationship carries file, method and confidence.

github.com/phcaradanai/Project-Explorer · Case study

The Fisher (King Fisher)

Sept 2026

Game, prototype · TypeScript, React, PixiJS, Zustand, Zod, Vite

Browser fishing-collection RPG: turn-based fish duels with seeded dice checks. Chapter 1 only (Village Canal and its King Fish).

github.com/phcaradanai/the-fisher · Case study

Shadow Council

Sept 2026

Game, prototype · TypeScript, Node.js, Server-Sent Events, npm workspaces, Vitest, Playwright

Browser bluff-and-deduction game for 2-6 players: a typed rules engine, an authoritative Node server and a client built without a bundler.

github.com/phcaradanai/shadow_council · Case study

Splendor-Online (Nova Frontier Online)

Jun 2026

Game, prototype · TypeScript, React 19, Vite, Express, ws (WebSocket), Tailwind CSS

Online multiplayer adaptation of a gem-trading board game, reskinned as a space setting; an Express and WebSocket server holds the state.

github.com/phcaradanai/Splendor-Online · Case study

Room 25 Ultimate (ห้องมรณะ 25)

Oct 2026

Game, prototype · JavaScript, Node.js, Express 5, Socket.IO 4, Web Audio API, node:test

Browser adaptation of the Room 25 board game: Socket.IO online rooms with a sanitising server, plus a single-device offline mode.

github.com/phcaradanai/escape-room · Case study

Coup Co-op

Sept 2026

Game, prototype · TypeScript, React 19, Vite, Express, Socket.IO, Tailwind CSS

Real-time online version of the Coup bluffing card game: Socket.IO rooms, scripted bots, and a server that sends each player a masked state.

github.com/phcaradanai/coup_coop · Case study

AI Product Intelligence Advisor

Oct 2026

AI tooling, prototype · TypeScript, Zod 4, Node.js (native type stripping, node:test), TanStack Start, React, Python (separate forecasting service)

Evidence-first promotion advisor on synthetic TV data: deterministic rules and ranking, human decision log, no LLM, not production approved.

github.com/phcaradanai/ai-product-intelligence · Case study

ChatGPT MCP bridge (Rust)

Aug 2026

Tool, prototype · Rust, rmcp (MCP SDK), axum, tokio, SQLite (rusqlite), clap

Rust MCP bridge that lets ChatGPT Web read and patch registered local projects through a small, path-confined tool set.

github.com/phcaradanai/chatgpt-mcp · Case study

Platform Control Plane (Backstage App Factory)

Aug 2026

System, prototype · TypeScript, Backstage, React 19, Vite, Storybook, Yarn 4

Backstage control plane that generates React apps from one template, with a shared UI package and an SDK whose adapters fail closed.

github.com/phcaradanai/platform-control-plane · Case study

Vending serial control API

May 2026 to Jul 2026

Hardware integration, prototype · JavaScript (ESM), Node.js, Express 5, serialport, MQTT, NATS JetStream

Node.js API that drives a vending cabinet over three serial ports, with optional MQTT and NATS JetStream publishing of QR and NFC scans.

github.com/phcaradanai/vending-3d-ctl-agent · Case study

The Patch Press

Oct 2026

Web, prototype · HTML, CSS, JavaScript, Serverless function, Vercel (hosting, from the site address)

Thai-language tech and open-source news dashboard in a comic-newspaper style, compiled automatically from GitHub and Hacker News.

Case study

PvP Tower Tactics prototype

May 2026

Game, prototype · JavaScript (Node ESM), node:test, GDScript, Godot 4.6.2

Prototype of a 1v1 tower-tactics game built around a shared draft pool, with in-memory backend contracts and a Godot scene prototype.

github.com/phcaradanai/pvp_td · Case study

Earlier projects named on the CV

PTT UI concept, SCG web management, SIPH auto dispense machine, ETRAN web management, AOT kiosk. Listed as published; no further details are given here.

Education

Bachelor of Engineering, SPU Dynamic University, 2016–2020

Generated from the portfolio's verified content; facts last checked 2026-10-24.
